PORT KEATS ROAD
IMPROVE FLOOD IMMUNITY AT MOYLE RIVER FLOODPLAIN

As part of the Regional Roads Productivity Package, work have commenced on Port Keats Road at the Moyle Floodplain. The project, jointly funded by the Northern Territory and Australian Governments will improve flood immunity in the area.

The upgrade is located approximately 108 kms from the Daly River Bridge and includes:
- a new 2 km section of sealed road; and
- raising an 18 km section of road and sealing.

Once complete, the upgrade will improve access and safety for local communities and general road users.

There will be increased construction traffic, with lane closures and temporary speed restrictions in place. Traffic will be detoured around sections of the works and motorists are urged to travel with care and adhere to all traffic management.

Works are expected to be complete by November 2015.
