

MANDORAH MARINE FACILITIES

The detailed design for Mandorah marine facilities commenced in June 2019.

As a part of this detailed design, geotechnical investigations are planned for 18 September 2019 around Mandorah Jetty for approximately three weeks. These investigations will be carried out by a barge (pictured below) which will assess the undersea bed profile to inform foundations depths, dredging requirements and confirm the concept plan.

Some noise will occur as a result of works and will be limited to between the hours of 6am to 6pm including weekends.

The barge will be secured to the undersea bed on spud legs to prevent general movement and drifting. The barge will be well lit by a white light and two yellow flashing lights.

Mariners are advised to navigate with caution when transiting the area and remain well clear of the barge and any testing site/equipment. A notice to harbour users has been issued by the Deputy Regional Harbour Master.

Community members are asked to follow any signs when using existing facilities.

If you have any questions or require more information, please contact **8924 7118** or transport.planning@nt.gov.au

Mandorah ferry service will operate as normal.
